Week – 1

Section-A:

Section-B:

Day 1 — Toolchain & Git

Task 1.1 Install Visual Studio Community + VS Code, .NET 8 SDK, SQL Server + SSMS, Node.js + npm.

Run `dotnet --info`. ✓ Done when: `dotnet --info` prints the SDK version in a screenshot.

Procedure:

Contacted the IT team to pre-install all the above apps. In command prompt executed `dotnet --info` to print the SDK version info Installed on PC.

```

C:\WINDOWS\system32\cmd. X + v
Architecture: x64
Commit: 901ca94124

.NET SDKs installed:
  10.0.301 [C:\Program Files\dotnet\sdk]

.NET runtimes installed:
  Microsoft.AspNetCore.App 10.0.9 [C:\Program Files\dotnet\shared\Microsoft.AspNetCore.App]
  Microsoft.NETCore.App 8.0.11 [C:\Program Files\dotnet\shared\Microsoft.NETCore.App]
  Microsoft.NETCore.App 10.0.9 [C:\Program Files\dotnet\shared\Microsoft.NETCore.App]
  Microsoft.WindowsDesktop.App 8.0.11 [C:\Program Files\dotnet\shared\Microsoft.WindowsDesktop.App]
  Microsoft.WindowsDesktop.App 10.0.9 [C:\Program Files\dotnet\shared\Microsoft.WindowsDesktop.App]

Other architectures found:
  x86 [C:\Program Files (x86)\dotnet]
     registered at [HKLM\SOFTWARE\dotnet\Setup\InstalledVersions\x86\InstallLocation]

Environment variables:
  Not set

global.json file:
  Not found

Task 1.2 `dotnet new console`, build, run, print "Hello cohort". ✓ Done when: the program runs and prints the text.

Procedure:

In \:C created a folder called HelloCohort by running `mkdir HelloCohort && cd HelloCohort` in cmd to redirect to HelloCohort Folder after creating. Then run “`dotnet new console -n HelloCohort`” & “`cd HelloCohort`”. This creates a new .NET console project and enters it. Open .csproj file in Visual Studio and Edit the program.cs to display Hello Cohort. In cmd, run “`dotnet run`” to see the below output.

Task 1.3 Create GitHub repo `impact-dotnet-<yourname>`, push first commit, open a trivial PR (edit README), merge it. ✓ Done when: the merged PR URL exists.

Procedure:

Create a repo in GitHub called “impact-dotnet-rithika”, commit the previous helloCohort code from Task 2 into GitHub by creating a branch “branchrithika”. Edit the Readme file or the print statement from the previous task to make changes, then commit this code to branch “branchrithika” and finally commit it to master to raise PR and merge without conflict.

The screenshot shows a GitHub pull request (PR) page for the repository 'rravi712 / impact-dotnet-rithika'. The PR title is 'Add initial Day1 Task description to README #2'. It shows that the PR has been merged from the 'branchrithika' branch into the 'master' branch. The PR description indicates that 1 commit was merged, and it took 40 seconds to complete. The PR is associated with 1 conversation, 1 commit, 0 checks, and 1 file changed. The file 'README.md' is highlighted, showing a diff with a single line added: 'Hi This is my Day1 Task.' The PR is marked as 'Merged' and 'Preview' is visible. The PR is also marked as 'Submitted' and '0 / 1 viewed'.

Task 1.4 Connect SSMS to local SQL Server; create database **SandboxDb**. ✓ Done when: screenshot shows the connection and the new database.

Rithika Ravi	P575	B01	"Week 1 — C# Language & Object Foundations".
---------------------	------	-----	--

Procedure:

Ensure you have SQL server and ssms pre-installed. In run type services.msc to ensure SQL Server is up and running. Then in cmd type “sqllocaldb info” command to get the server's name. Open SSMS Connect using server name. Once in expand the Object explorer and right click on databases to create new database “SandboxDb”

Day 2 — Namespaces, Identifiers, Preprocessor

Task 1.5 Create namespace `SchoolManagement` with a `Student` class. Call it from `Program.cs` with and without the directive. ✓ Done when: both call styles compile and you've noted the difference in a comment.
